

More than an Electronic Lab Notebook

eLabJournal Solutions

Bringing tomorrow's ideas into today's labs

eLabJournal is available in three different configurations to offer maximum flexibility and comply with security and privacy policies.

Turn-key
Fully Configurable
ISO-certified
Fully Managed
Private Cloud
On-premise
Flexible contracts
Customizable

eLabJournal Cloud

eLabJournal Cloud is provided as Software as a Service (SaaS). The application is available as an off-the-shelf configurable Electronic Lab Notebook that requires no hardware investment. Access eLabJournal anywhere and anytime online via your web browser. eLabJournal Cloud is hosted in multiple ISO-certified data centers with high availability and full redundancy. Data are backed up in real-time and are periodically archived to an off-site encrypted vault. System maintenance, software updates, and support are included in the offered licenses.

eLabJournal Private Cloud

eLabJournal Private Cloud is a dedicated setup in one of the ISO-certified data centers of our hosting provider. eLabJournal Private Cloud can be both configured as cloud accessible application, or installed to be only accessible on your local network. This cloud solution aligns perfectly if you require a dedicated and isolated system installation, while keeping the advantages of fully managed software including system maintenance, software updates and data back-ups.

eLabJournal On-Premise

eLabJournal On-Premise is similar to eLabJournal Private Cloud, but offers installation of the application on company or institute servers. This solution fits your needs best if you need to comply with strict IT policies, for example, having data stored locally. Your IT department will be responsible for system monitoring, maintenance, and data back-ups, while we provide software updates and functional support in a tailored service level agreement.
